The AFIT of Today is the Air Force of Tomorrow.

CLOUD BENCHMARK TESTING OF CASSANDRA ON RASPBERRY PI FOR INTERNET OF THINGS CAPABILITY

Daniel Richardson, Capt, USAF
17M-GE

Overview

The AFIT of Today is the Air Force of Tomorrow.

- Motivation
- Problem Statement
- Contributions
- Background and Related Works
- Experiments
- Results
- Conclusions

Motivation

The AFIT of Today is the Air Force of Tomorrow.

APPLICATION SPACE

Limited
Hardware

- Light
- Mobile
- Available
- Partition
Tolerance
- Variable
Consistency

Distributed
Database

Motivation

The AFIT of Today is the Air Force of Tomorrow.

Internet of Things - Model

Problem Statement

The AFIT of Today is the Air Force of Tomorrow.

- This research seeks to characterize, if any, conditions for feasible operation of distributed database technology on limited hardware.

Research Questions

The AFIT of Today is the Air Force of Tomorrow.

- Effect Characterization: Timing and Scalability
 - Variation in RAM
 - Wired vs. Wireless
 - Hardware vs. Virtual

Contributions

The AFIT of Today is the Air Force of Tomorrow.

- Framework for Evaluation
- Insight into Scalability for Both a Wired and Wireless Configurations
- Performance Comparison between physical devices and virtual devices

Experimental Setup

The AFIT of Today is the Air Force of Tomorrow.

Workload	Read	Update	Scan	Insert
A	0.50	0.50	0.00	0.00
C	1.00	0.00	0.00	0.00
E	0.00	0.00	0.95	0.05
I	0.01	0.00	0.00	0.99

Communication	Platform	RAM
Nodal	Virtual Machine	1 GB
Nodal	Virtual Machine	2 GB
Nodal	Virtual Machine	4 GB
Ethernet LAN	Raspberry Pi	1 GB
802.11 LAN	Raspberry Pi	1 GB

Experimental Setup (cont)

The AFIT of Today is the Air Force of Tomorrow.

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload A

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload C

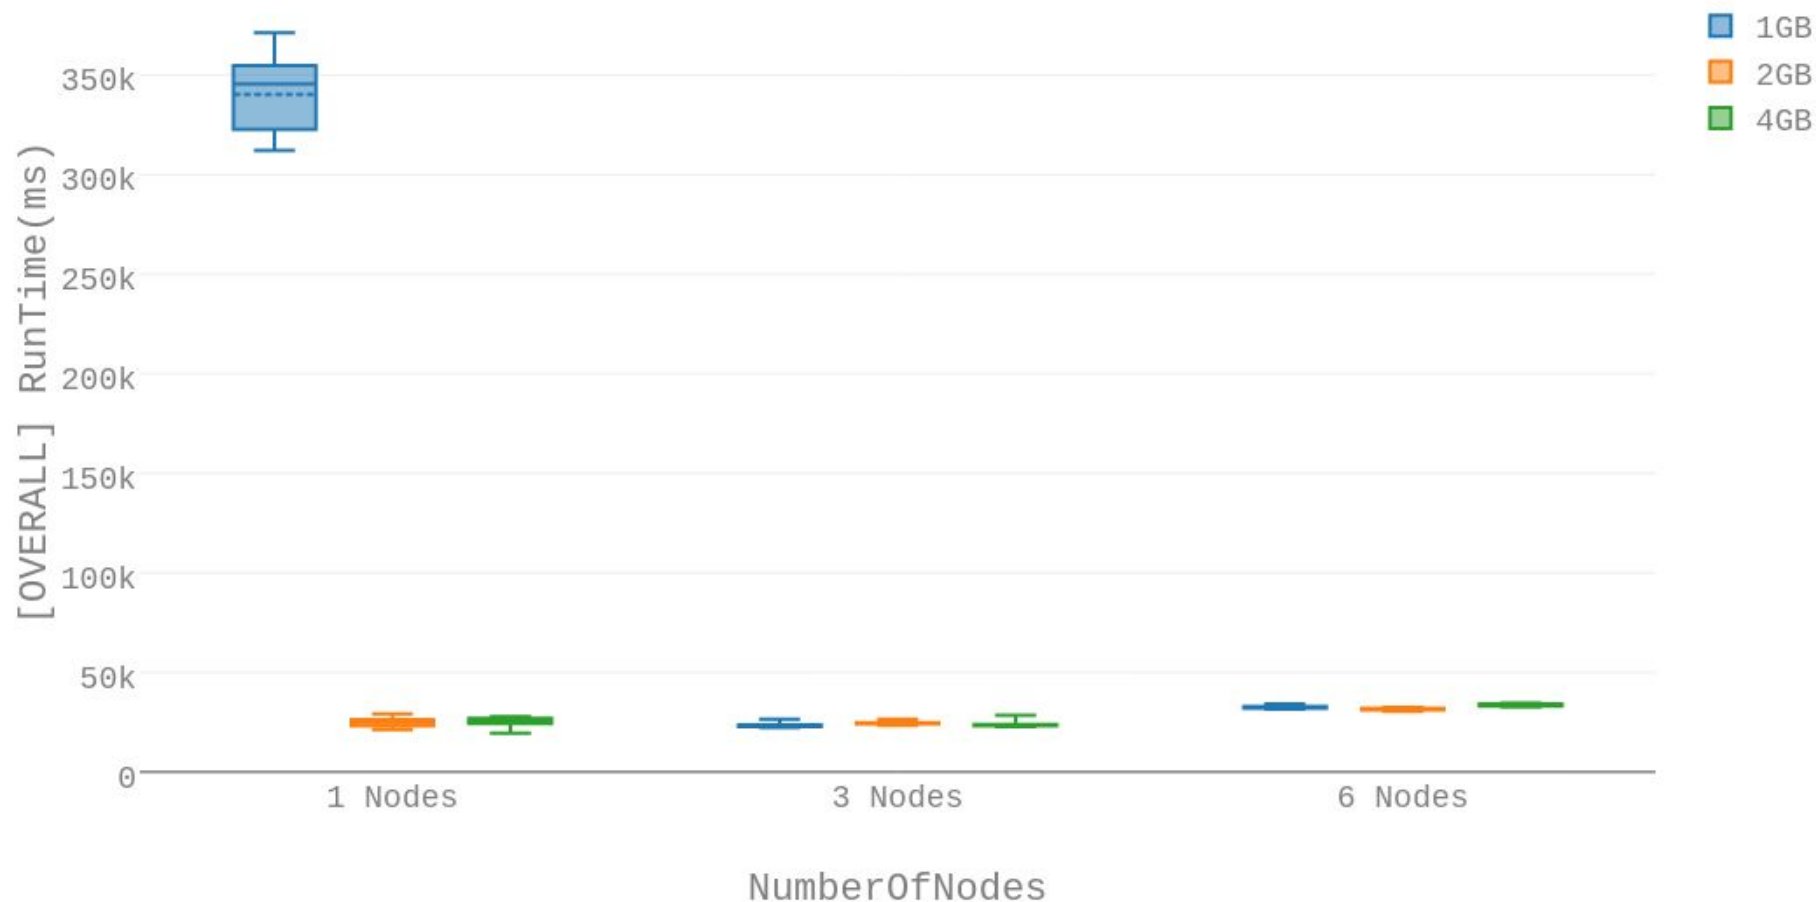

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload E

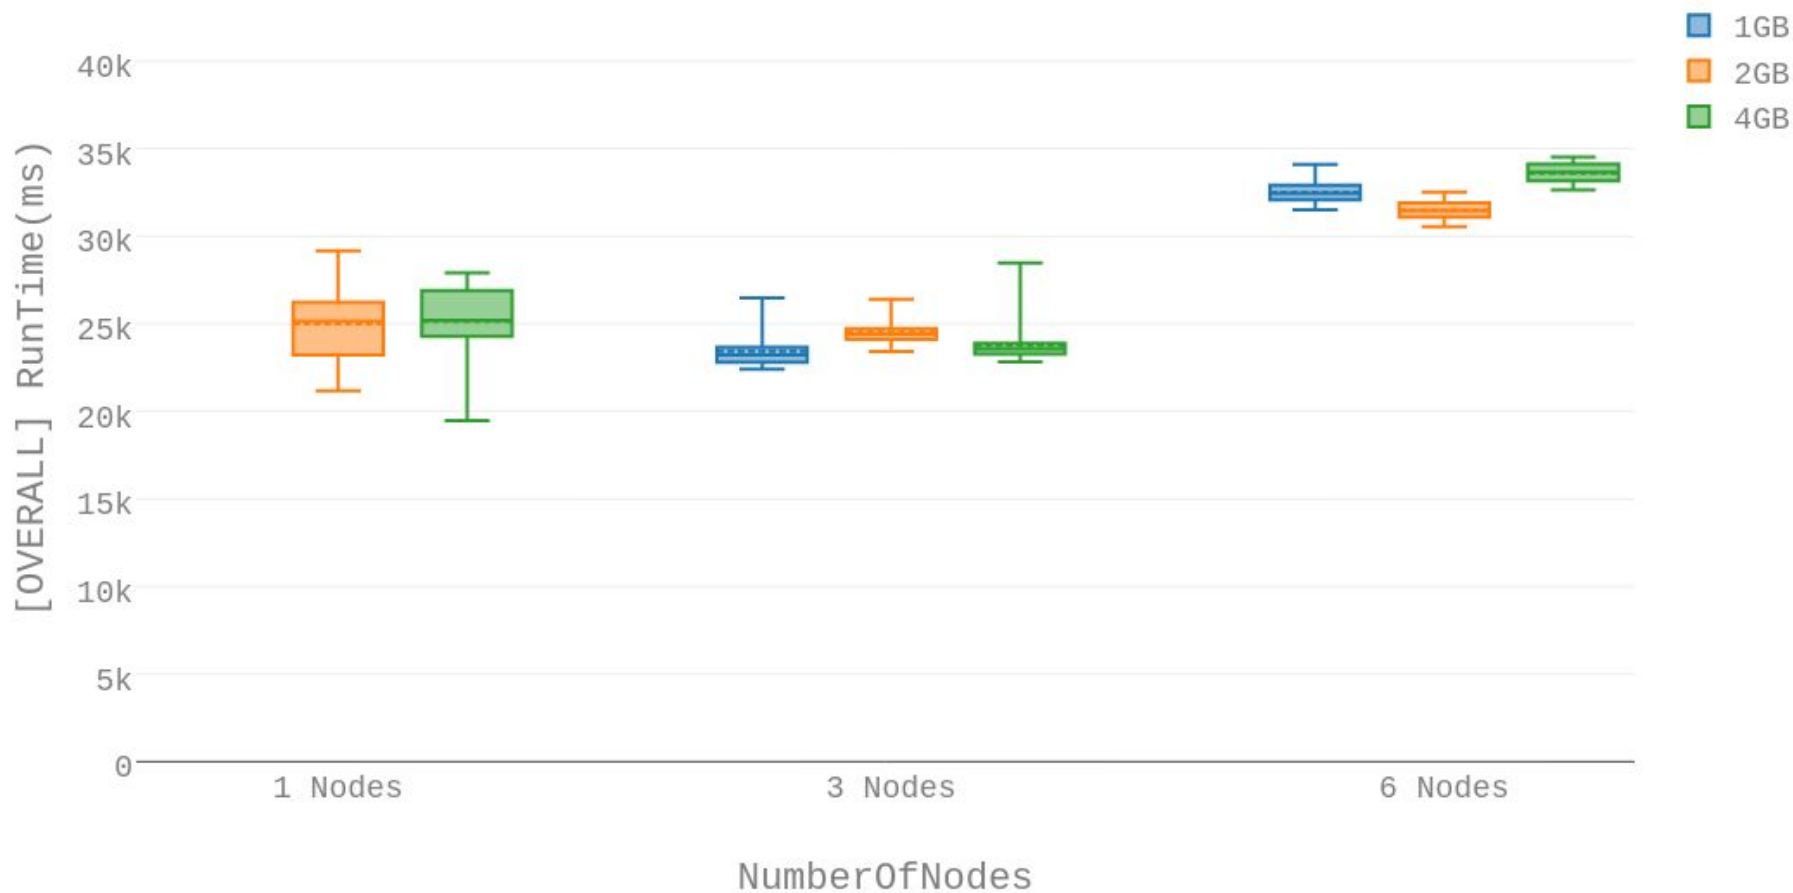

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload E

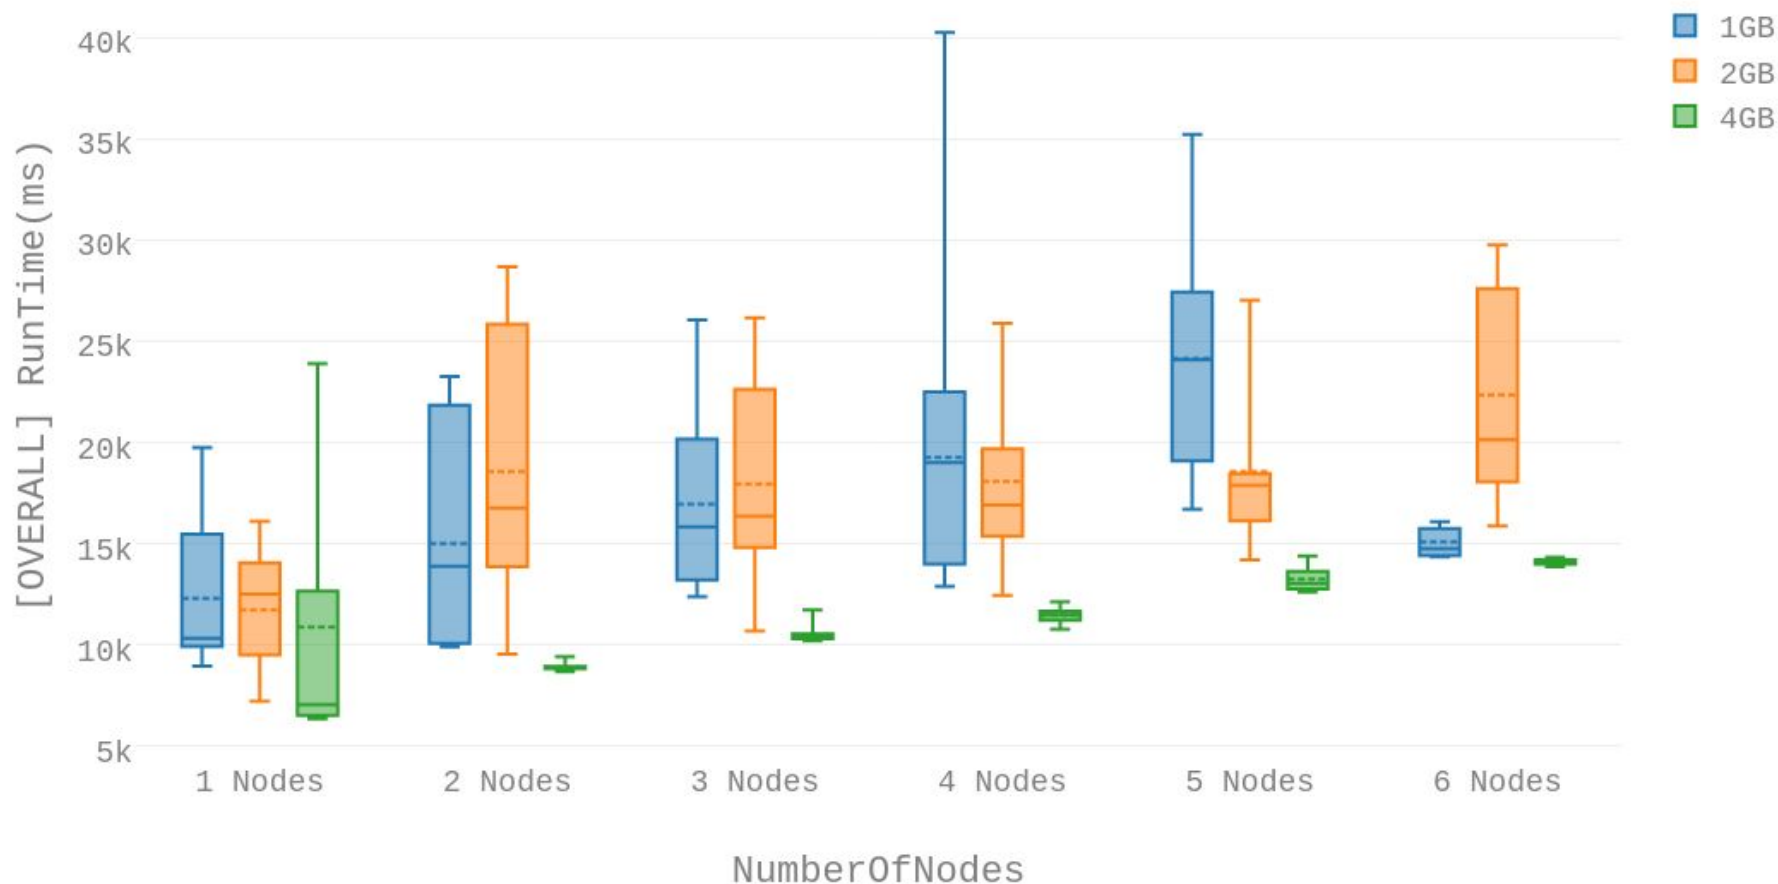

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload I

Linear Regression (A)

The AFIT of Today is the Air Force of Tomorrow.

Cluster Size (nodes)	Slope (ms per GB RAM)	Intercept (ms)	r-Value	p-Value	Standard Error
1	-68.8	6.45e+03	-0.509	2.08e-05	14.9
3	120	1.01e+04	0.458	0.000162	29.9
6	147	1.43e+04	0.514	1.67e-05	31.5

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

- These results fail to suggest a linear prediction of performance based on RAM.

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload A

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload C

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload E

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload E

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload I

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

- These results seem to suggest Cassandra's scalability may be a bit threatened by wireless. Additional testing may be of value to see if this trend continues or if something could ameliorate it, such as employing the request-to-send.

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload A

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload C

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload E

Experimental Results

The AFIT of Today is the Air Force of Tomorrow.

Execution Time, Workload I

Absolute Differentials

The AFIT of Today is the Air Force of Tomorrow.

Number of Nodes	1-Node Cluster	3-Node Cluster	6-Node Cluster	OVERALL
Count	21	21	21	63
Mean (ms)	1.28e+04	3.16e+04	1.95e+04	2.13e+04
Standard Deviation (ms)	1.12e+03	1.65e+03	1.78e+03	7.96e+03
Minimum (ms)	1.03e+04	2.81e+04	1.64e+04	1.03e+04
25% (ms)	1.23e+04	3.07e+04	1.83e+04	1.35e+04
Median (ms)	1.28e+04	3.14e+04	1.94e+04	1.94e+04
75% (ms)	1.35e+04	3.22e+04	2.02e+04	3.06e+04
Maximum (ms)	1.52e+04	3.49e+04	2.37e+04	3.49e+04

Conclusions

The AFIT of Today is the Air Force of Tomorrow.

- Available RAM
 - Results and interpretation fail to suggest any utilitarian linear model of performance.
- Workload
 - Results suggest that workload can make a difference in performance, and such differences were accentuated with hardware changes.
- Scalability
 - Results suggest reasonable scalability of wired and virtual clusters over cluster size... wireless less so and results suggest the utility of additional experimentation.
- Raspberry Pis versus Virtual Machines
 - Results suggest confirmation of a cost in execution time.
 - Results also suggest more experimentation could lead to a correction factor for simulated applications.

Future Work

The AFIT of Today is the Air Force of Tomorrow.

- Varying Database Size
- Wireless Configurations (request-to-send, maximum transmission unit)
- Varying Hardware, not just the Raspberry Pi
- Testing Larger Clusters
- Varying Thread Count

Future Work

The AFIT of Today is the Air Force of Tomorrow.

- WiFiPi Prototype
 - Sniff traffic with scapy
 - Filter out probe requests
 - Extract SSIDs (plaintext), IP Addresses
 - Append to Distributed Database
